The Super Soaker is listed as one of the top twenty toys of all time, and it was invented entirely by accident. The inventor, Lonnie Johnson, was trying to create a new cooling system for rockets, but he instead created the mechanics for the iconic toy.
This book is yours to keep at home and enjoy over and over again! Here is a way you can take what you learned from the book and apply it at home.

- Ask your student to tell you what they know about inventors/inventions.
- Each of you share in invention you enjoy that is useful to you everyday.

Encourage your student to create a new invention and help them decide:
What does it do?
Who does it help?

Offer paper and coloring utensils so your student can design their invention.

Take it one step further and offer a variety of crafting materials so that your student can construct their invention and create a model.
